## ABOUT ME

My name is Gary Stewart and I am 27 year old web developer, currently working for CampManager Ltd in the Belfast area.
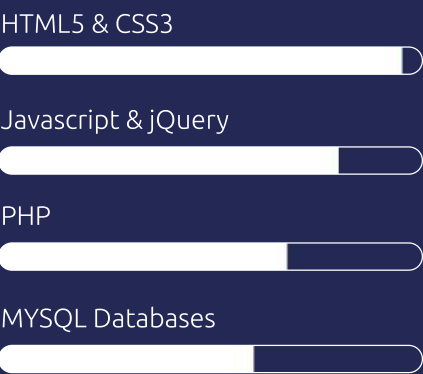

My key interest on a day-to-day basis revolves around the IT sector and software development in particular.

Outside of this, I enjoying reading about relevant topics currently at the forefront of puplic

PERSONAL SKILLS

Mathematics

English

Communication

Problem Solving

CAREER SKILLS

HTML5 & CSS3

Javascript & jQuery

PHP

MYSQL Databases

Career Objective

To work for a software development company that allows for creativity and personal touch to be implemented during the software development life cycle.

I am always eager to learn and research the potential of new web based technologies, that can assist with improved work flow, increased productivity , but can also improve my own career skills within the software development sector.

Employment Experience

Currently, I am an employee at CampManager Ltd, a leading industry company. This company provides software and online booking systems for Holiday & Tourist Parks across the United Kingdom and Europe.

Employment Status: Currently Employed

Number of years: 4 Years (2018 - 2022)

Role: Front-end Web Developer & Technical Support

 Web Languages: HTML5, CSS3, jQuery, Javascript, ASP Classic

Standout Achievement:

I have worked on a number of projects over the course of my tenure with this company; most notably with the development of an interactive site map of the clients business.

Prior to this, the company made use of Adobe Flash to generate a like for like of the clients business and dynamically populate this with information from a server.

With the deprecation of Flash, I was tasked by my team leader to develop a new method to ensure this feature could continue to be provided to our clients.

I was able to replicate this with the use of an SVG document that I would populate dynamically with the same information. With this new method developed, I was also now able to provide the same feature to mobile and tablet users, rather than being restricted to a desktop only feature.

Educational Achievements

Institution: Ulster University
Full Time Course: Computing Science

Degree: BSc Computing Science (2:1)

Institution: Lurgan College
Full Time Course: A Levels
